

## Implementation Flexibility

### Phase 1: Start Simple

✔ Sync: pawners only

✗ Local: everything else

### Phase 2: Add More

✔ Sync: pawners + categories

✗ Local: tickets, transactions

### Phase 3: Advanced

✔ Sync: pawners, categories

🔍 View: tickets (read-only from other branches)

✗ Local: transactions, payments

## My Recommendation

### Start with Customer Sync Only:

- ✔ Sync: **pawners** (customers)
- ✔ Sync: **categories** (item types)
- ✗ Local: Everything else

### Why?

- Customers can visit any branch ✔
- Financial accountability stays local ✔
- Simple to implement and understand ✔
- Can expand later based on your needs ✔

Would this approach work for your business model? 😬
